Attachment "A"

The total flow from the spring is approximated 20 gallon per minute or 0.045 c.f.s. or 32.2 acre-feet per year. Joe Saval Company application no. 80891 for stockwater purposes [senior to 80892] will utilize 12.7 afa leaving approximately 19.5 afa for wildlife purposes. The maximum diversion requested is 0.045 c.f.s., which will be fully diverted for wildlife purposes during the non-stockwatering season [September 15 to February 28th] and partially diverted for wildlife purposes during stockwater season.

It is proposed that the water will be diverted through a dirt channel to an improved wetlands / pond area for wildlife purposes. The wetlands area will be approximately 0.5 acres in size. The diverted water will be consumed by available wildlife, as well as portions will infiltrate through the ground surface and also lost due to evaporation.

Application no. 80892 is to request 0.045 c.f.s maximum diversion - not to exceed 19.5 acre-feet per year.
